

All parts are not created equal.

Some are made by General Carbide.

General Carbide manufactures more than 50 grades of superior quality tungsten carbide tooling for a variety of cutting and metal forming applications. We specialize in helping you sort through all of the design considerations — quickly and easily — before deciding on the material formulation for your application. The result is a product that uses the unique properties of cemented carbide to your competitive advantage.

But that's not all, we can also assist you with everything from attaching and assembling, to finishing techniques, and everything in between. Regardless of your application, General Carbide has the expertise to equip you with the carbide preforms you need to get the job done on-time and on-budget.

Call 800.245.2465 or visit www.generalcarbide.com to learn how the Wear Solutionists at General Carbide can help enhance your productivity.
