

REDEFINING POSSIBLE

Complete Process Control – From Powder to Polish

At General Carbide, we specialize in shipping complete **Stamping/Lamination, General Metalforming and Specialized Fastener Tooling** to Tier 1 and Tier 2 suppliers. Our tooling is made from proprietary, automotive-specific grades of tungsten carbide that meet the highest performance standards. By offering superior toughness, along with resistance to abrasion, compression, corrosion, deflection, erosion, torsional stress and wear, General Carbide tooling conforms to the most demanding specifications.

As an industry leader, we know that the best tungsten carbide grades make the best finished tooling. We apply that expertise to the formulation of ideal carbide grades for many applications, such as **Hammer Dies** for drive lines and **Spline Dies** for gears. What's more, our vertical integration, flexibility and responsiveness make us easy to work with.

To find out how we can help you Extend Die Life, Reduce Downtime and Increase Productivity, call 800.245.2465 or visit gencartooling.com
